DETAILED ACTION
EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Reitseng Lin on 12/06/2011.

The application has been amended as follows:

1). Amend claim 21 to read:

21. A method for operating a television apparatus having a processor, the method comprising steps of:

tuning a channel;

receiving an updated program guide from a broadcaster while said channel is tuned, wherein said updated program guide is provided from said broadcaster without being requested by said television apparatus;

in response to receiving said updated program guide, said processor determining if a banner advertising a future program on said channel is currently displayed while said channel is tuned;

in response to determining that said banner is currently displayed while said channel is tuned, said processor performing a first function while said channel is tuned;
and

in response to determining that said banner is not currently displayed while said channel is tuned, said processor performing a second function different from said first function while said channel is tuned.

2). Amend claim 28 to read:

28. A television apparatus, comprising:

means for tuning a channel;

~~means for~~ a processor receiving an updated program guide from a broadcaster while said channel is tuned, wherein said updated program guide is provided from said broadcaster without being requested by said television apparatus; and

~~means for~~ said processor determining if a banner advertising a future program on said channel is currently displayed while said channel is tuned in response to receiving said updated program guide; and wherein:

if said ~~determining means~~ processor determines that said banner is currently displayed while said channel is tuned, a first function is performed while said channel is tuned; and

if said ~~determining means~~ processor determines that said banner is not currently displayed while said channel is tuned, a second function different from said first function is performed while said channel is tuned.

3). Amend claim 29 to read:

29. The television apparatus of claim 28, further comprising ~~means for~~ said processor requesting said updated program guide from said broadcaster a predetermined time period before a detected end time of a currently tuned program on said channel.

Allowable Subject Matter

2. **Claims 21-40** are allowed. The following is a statement of reasons for the indication of allowable subject matter: The present invention comprises a television apparatus that displays a banner advertising a future program while tuned to a channel, where an updated program guide is pushed to said television apparatus; the apparatus determines whether the banner displaying a future program is currently displayed when the updated program guide is received and based on the determination it either updates the banner with new information or displays banner with new information.

The closest prior art, Knudson, Gerba, and Mountain show a similar system. However, Knudson discloses of receiving a real time data and programming guide simultaneously, Gerba discloses of determining whether the banner is displayed, and Mountain discloses of displaying a banner advertising a future program. Thus, Knudson, Gerba, and Mountain do not disclose nor suggest that in response to receiving said updated program guide, said processor determining if a banner advertising a future program on said channel is currently displayed while said channel is tuned and performing different functions based on the determination, as required by all the independent claims.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
